Capability Information

Business Profile

HTD Australia Pty Ltd, formerly known as Hi-Tech Drilling, was first established in 1988. Our services primarily consisted of installing conduits under paths, driveways, roads and railways through a drilling process involving grndomat displacement hammers. After many years of providing customers with consistent quality service, the demand for larger diameter and longer pipe installations grew. Hi-Tech Drilling advanced into dry bore augering and pipe cracking and we purchased a D36x50 Vermeer Directional Drill.

In 2009, our company re-structured becoming HTD Australia Pty Ltd and was the beginning of a new era for HTD Australia. In 2012 we purchased a D20x22 Vermeer Directional Drill followed by a VSK2200 & VSK800 Vermeer Vacuum Excavators in 2013 and 2014 consecutively. Our modern and effective drilling machinery along with quality vacuum excavators enables us to compete with larger horizontal directional drilling companies in the industry.

More recently HTD Australia has expanded into larger premises, employing experienced administration staff and additional plant operators to keep up with the demand for our services.

For more than two decades, HTD Australia has been servicing private and sole traders, government based agencies, major services and network providers and small and large construction companies. We have the knowledge, experience and resources to ensure that all projects run smoothly, on budget and to plan.

Services

HTD Australia specialise in horizontal directional drilling services under paths, driveways, roads, railways, congested and environmentally sensitive areas. Our abilities range from installing 19mm poly pope under driveways up to 500mm HDPE pipes under national highways. Our fleet of vacuum excavators are often used in conjunction with our drilling services to remove drilling spoil and to locate underground services.

Fleet

Our fleet includes:

- D36 x 50 Horizontal Directional Drill Series II (2009) – Isuzu GIGA CXZ 455 (2009)
- D20 x 22 Horizontal Directional Drill Series II (2012) – Isuzu FVZ 1400 Long (2014)
- Vacuum VSK2200 Excavation Truck (2012) – Isuzu Twin steer FYH 2000 (2013)
- Vacuum VSK800 Excavation Truck (2014) – Isuzu F Series FSR 850 Long (2014)
- 2 x Displacement Hammer Vehicles
- 2 x Service Trucks

Management Systems

At HTD Australia we continually review and improve our quality, safety and environment management systems. In April 2015 we gained certification for our systems against ISO9001 Quality Management and AS/NZS 4801 Safety Management and more recently in April 2016 achieved certification for ISO 14001 Environment.
